EXPERIENCE

Data Engineer

Tencent

Jan 2026 – Present

Bucharest, Romania

- **Architected and modernized** data lake and data warehouse infrastructure on **Google Cloud Platform (GCP)**, designing robust batch pipelines orchestrated via **Cloud Composer (Airflow)** to centralize and transform data within **BigQuery**.
- **Engineered highly resilient streaming analytics systems** by developing custom **Apache Beam** pipelines deployed on **Cloud Dataflow**.
- Integrated these pipelines with **Cloud Pub/Sub** to enable scalable, real-time data ingestion into **BigQuery** for low-latency business intelligence.
- Used **Infrastructure as Code** practices by developing a comprehensive **Terraform** framework, fully automating the provisioning and management of GCP resources across isolated environments.
- **Designed and developed real-time dashboards** in **Looker**, leveraging streaming BigQuery infrastructure to empower stakeholders.
- Developed **proactive cost-monitoring frameworks** leveraging BigQuery's INFORMATION_SCHEMA to optimize query performance and track compute expenditures.
- Designed **daily aggregation pipelines** and integrated automated data quality checks to continuously validate tables, ensuring high data integrity.

Data Engineer

Agile Freaks

Mar 2025 – Jan 2026

Bucharest, Romania

- **Built and maintained** scalable ETL pipelines utilizing **Airbyte, Python, and DBT**.
- **Architected the Snowflake data warehouse** across Bronze, Silver, and Gold layers to ensure organized data progression.
- Ensured high data quality by implementing rigorous tests focused on **accuracy, uniqueness, and schema validation**.
- **Orchestrated DBT models** via GitHub Actions and maintained the underlying **AWS EC2 infrastructure** for high availability.
- Designed **intuitive dashboards in Superset and Tableau** to support stakeholders with actionable KPIs and insights.

Data Engineer

Rebeldot

Oct 2022 – Mar 2025

Cluj-Napoca, Romania

- **Developed scalable data infrastructure** and automated ETL pipelines, using **Python** to build custom data ingestion and transformation scripts.
- Orchestrated pipelines with **Apache Airflow** to manage dependencies and schedule data flow from **AWS S3 to Snowflake**.
- Implemented a robust **data quality monitoring process** that included designing and building custom checks for completion, accuracy, and uniqueness.
- **Designed and implemented dynamic task mapping** to optimize performance by executing tasks in parallel, improving scalability.
- **Created a custom operator** to handle batch file transfers between **SFTP and Amazon S3**, significantly streamlining workflows.
- Used **dbt** to transform raw data into a structured data model, creating clean staging tables and business-ready marts.
- Built and maintained interactive dashboards in **Apache Superset and Tableau** to visualize key metrics and business trends.

EDUCATION

University Babeş-Bolyai

Bachelor of Science in Computer Science

Cluj-Napoca, Romania

2020 – 2023

AWARDS AND CERTIFICATIONS

- **Azure AI Engineer Associate** – AI-102 Certification
- **Supervised Machine Learning** – Regression and Classification
- **Cambridge English: Advanced (CAE)** – Level C1

TECHNICAL SKILLS

Languages & Databases

: Python, SQL, MSSQL, Snowflake, BigQuery

Cloud & Infrastructure

: GCP, AWS, Docker, Podman, Terraform

Data Engineering Tools

: Apache Airflow, Apache Beam, DBT, Airbyte, Fivetran

BI & Visualization

: Tableau, Apache Superset, Looker, Jupyter Notebook
